

imaxx Canadian Fixed Pay Fund

- The Canadian stock market has performed well thus far in 2016, benefitting from strong growth in the resource focused Material and Energy sectors.
- The Fund has been significantly underweight the Materials and Energy sectors in 2016, given their volatile nature. Therefore, on a relative basis, the fund has lagged its benchmark and peer group, year to date.
- However, we are now seeing a rotation away from commodity focused investments, as market participants consolidate the gains made earlier in the year.
- The U.S. economy continues to demonstrate resilience, with strong job growth and improving corporate earnings, while economic growth and job creation remain challenges in Canada.
- Equity valuations continue to be reasonable, supported by low rates, the potential for additional fiscal spending, and improving earnings.
- Certain U.S. sectors, especially Health Care and Information Technology, continue to look attractive when compared to the available options in Canada. We continue to take advantage of our ability to invest in high quality U.S. stocks in these sectors.
- As we approach the end of 2016, we remain vigilant in monitoring the risks to fund performance, including interest rate moves, political risk from the U.S. election and increased volatility. These risks underscore the importance of an appropriately diversified and actively managed portfolio.

“The primary focus of the Fund remains the active management of large-cap equities across a blend of dividend growth and dividend income oriented companies, complemented by a fixed income portfolio, predominantly invested in corporate bonds, which provide both yield and stability to help navigate through challenging periods.”

– Glenn Paradis, Head of Equities, Foresters Asset Management Inc.

Current Positioning (as of August 31, 2016)

- The Fund is positioned to capture upside performance without adding excessive downside risk. Stocks in the Fund have higher profits, more free cash flows, lower valuations and better profitability than the benchmark.
